                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a grass plant, which has been genetically modified to substantially inhibit generative propagation and carry herbicide resistance. The grass is useful for growth and/or propagation of grasses. The grass is used to play at least one sport (e.g. baseball, cricket, football, golf, rugby, soccer or tennis), or used at least in a portion of an athletic field, lawn or park. The grass is fed to animal (e.g. cattle, goat, horse or sheep) or used as animal feedstuff.

The present sequence represents the coding sequence of pVDH636 vector containing the Arabidopsis AtHI gene, which was used to inhibit flowering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New genetically modified grasses that express inhibited generative propagation, or herbicide resistance, useful for forage (e.g. cattle feedstuff) or amenity purposes (e.g. for use in an athletic field, lawn

                                                       are
                                               Genomic and cDNA encoding porcine CPN are claimed. Also claimed are fragments encoding the last 22 AAS (CPN-22) and the last 53 AAS (CPN-53). Proteins encoded are also claimed. The full length DNA includes a promoter which may act in a brain-specific manner so could be used to control expression of other genes in the brain

A chromosomal DNA fragment (AAT71220) includes the promoter region and structural gene coding for the precursor protein (AAW21990) of porcine C-type matriuretic peptides CNP-53 (AAW21991) and CNP-22 (AAW21992). It was isolated from a porcine chromosomal gene library using a probe prepd. by PCR amplification of porcine DNA using primers (see also AAT71222 and AAT71224) based on the N- and C-terminal portions of CNP-53. A signal peptide is present in the N-terminal region of the precursor protein (propro-CNP) and both CNP-22 and roll-53 are secreted when the structural gene is expressed in COS-1 colls. The structural gene is expressed in COS-1 for use in studying the biosynthesis and physiological actions of CNP and to develop pharmaceutical applications. The promoter

Sequences AAS29931-AAS30164 represent genomic DNA molecules, which encode the lung antigen polypeptides of the invention. Lung antigen polypeptides are useful in the diagnosis, cand their associated polynuclectides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as corneal infection, endocrine disorders such as corneal infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Crohn's disease, renal disorders such as glomerulonephritis and also be used to aid wound healing, to prevent skin aging due to subburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated polypeptide for treating, preventing and/or prognosing respiratory disorders related to the lung including lung cancers and also for testing and detection e.g. diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       at ftp.wipo.int/pub/published_pct_sequences.

GENERAL INFORMATION:
GENERAL INFORMATION:
1 TITLE OF INVENTION: Induction of blood vessel formation through administration:
1 TITLE OF INVENTION: Polynuclectides encoding sphingosine kinases
1 TITLE OF THE REFERENCE: 4-31617
CURRENT PAPLICATION NUMBER: US/09/970,516
CURRENT PELLING DATE: 2001-10-04
NUMBER OF SEQ ID NOS: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 974)

/note="voetor: phOS1; Site_l: Bst I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica ausing a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoceba histolytica: a method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + 1 method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

- 'Gollaboration of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain vise for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at the provided by the can be
Drosophila melanogaster genome survey sequence TET3 end of BAC # BACR13C17 of RPCI-98 library from Drosophila melanogaster (fruit AL065132

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etded du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazuctoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces
of 10 contigs. The true order of the pieces
at snot known and their order in this sequence record is a rubitrary. Gaps between the contigs are represented as a rubit ready will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                         5963 6062: gap of 100 bp 6063 87223: contig of 81161 bp in length 87224 87323: gap of 100 bp 100 bp 95422 95521: gap of 100 bp 95522 110722: contig of 15201 bp in length 95522 110722: contig of 15201 bp in length

                                                                                                                                                                                  NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
